VIRTUAL PARTNERS MEETING

Advancing Western Monarch and
Native Insect Pollinator Conservation

TUESDAY, SEPTEMBER 10, 2024

Insecticides in the West

Aimée Code

aimee.code@xerces.org

The Xerces Society for Invertebrate Conservation

For more than 20 years, Aimée has worked to address pesticide concerns—she has directed Xerces' Pesticide Program for over a decade. Her background in integrated pest management and toxicology allows her to help home gardeners, farmers and other land managers shift to ecologically-sound practices. She also makes pesticide research approachable so anyone can understand and address potential risks. Her work specific to monarchs started in 2019 through pesticide sampling in the west.
