Native Insect Pollinator Conservation

TUESDAY, SEPTEMBER 10, 2024

Climate Change and Western Butterflies

Matthew L Forister

mforister@unr.edu

University of Nevada, Reno

Forister grew up near Sacramento, California, and has been a member of the Biology faculty at the University of Nevada, Reno, since 2008. Work with his students and colleagues has involved diversification and specialization, but now mostly focuses on issues of global change and butterflies.

During the summer months, Forister and grad students help maintain one of the world's longest-running butterfly monitoring projects, the Shapiro transect across Northern California.
