# Bumble Bees: The State of the Data

**Rich Hatfield**

[rich.hatfield@xerces.org](mailto:rich.hatfield@xerces.org)

Xerces Society for Invertebrate Conservation

Rich is a senior conservation biologist with the Xerces Society, where he leads bumble bee conservation programs. He has developed conservation status assessments for bumble bees for the IUCN and is currently helping to direct bumble bee atlas programs in 20 states throughout the U.S., with help from partners and colleagues. These efforts have amassed one of the largest effort-based datasets for bumble bees, which are now being used to improve conservation assessments, and inform conservation policy and management.
